Hi Jim, Ken Gagnon is here today and we discussed a couple of things. One is that we are going to change the wording of our certs in the case of Heroin results. We now say "found to contain Heroin,(diacetylmorphine) class A. We are going to eliminate the word diacetylmorphine going forward. I don't know why we've incorporated diacetylmorphine in the cert since it was pointed out that Heroin is in the statute. Secondly, we are thinking of eliminating the term "derivative of Opium" for any Hydrocodone results classC. We don't normally report a net weight for Hydrocodone Class C, but we have an ADA who is asking us to do so, but we don't want to get in the habit of treating these as potential traffickings. Also Ken said he will visit you possibly Tuesday or Wednesday. Talk to you later. Chuck S
